Key skills and Knowledge

- Language Design and Interpreter/Compiler Construction.
- Multidisciplinary engineering (SE, telecom, electronics)
- International work experience (France, Korea, Hungary, Sweden)
- Ex-college professor and Researcher
- Technical Documentation and Scholarly Publications
- Bilingual French/Spanish and Fluent English (C1 level 93%)

Employment History

2023- Turnstiles Kft. (Budapest, Hungary)

Founder & Compiler Engineer

Freelance compiler engineer, syntax and semantics.

2019-2023 LIGO lang (Paris, France)

COO & Compiler Engineer

Lead dev on the front-end of the LIGO compiler and the CameLIGO and PascaLIGO languages for smart contracts on Tezos.

2018-2019 Nomadic Labs (Paris, France)

Compiler Engineer

Joined the core dev-team behind the Tezos cryptocurrency, where I can work on efficient, secure and self-governing blockchains with certified Smart Contracts, thanks to the OCaml programming language.

2017-2018 GrAI Matter Labs (Paris, France)

Compiler Engineer

Design of a Domain-Specific Language based on OCaml for describing a new kind of computational neuromorphic spiking network, and implementation (in OCaml) of an interpreter and two compilers to OCaml, leveraging the existing ecosystem and tools.

2016-2016 Wolfram | MathCore (Linköping, Sweden)

Compiler Engineer

Design and implementation (using OCaml) of a correct and complete set of parsers for the Modelica compiler of Wolfram SystemModeler, featuring a precise, correct and complete set of syntax errors thanks to the parser generator Menhir.

2015-2016 Numalis (Montpellier, France)

Compiler Engineer

Development of tools in C++ and OCaml for assessing the loss of accuracy in floating-point calculations, by means of source-to-source transformations (standalone and based on Clang/LLVM) of C++ code.

2014-2015 Cortus (Montpellier, France)

Compiler Engineer

Maintenance and development of a .NET compiler (in C# and OCaml) for Cortus microprocessors.

2001-2014 *Researcher and University Professor* (France, Korea, Hungary)
(École Supérieure d'Ingénieurs Léonard de Vinci, Konkuk University, Eötvös Loránd University) R&D on compiler construction, protocol verification, domain-specific language design (Internet of Things), augmented reality, web-based framework for e-learning. Teaching of programming to undergraduates and postgraduate students.

2000 PolySpace Tech. (now MathWorks, Montbonnot, France)

R&D Engineer

Development of a static analyser for JavaCard, automatic testing, reverse-engineering and maintenance, case studies and sales support.

1998-00 National Institute of Telecommunications (now Télécom SudParis)

R&D Engineer (Software for Networking Lab.)

R&D projects, specification-based test generation for telecommunication services, development of tools for protocol testing.

1997-98 Alcatel-Alsthom CRC (now Alcatel-Lucent R&I, France)

Case Engineer (Object Architecture Unit)

Design of a software quality analysis for a C++ project (networking).

Education

1993-98 INRIA & Pierre and Marie Curie University (France)

Ph.D. in Informatics (cum laude)

Design and implementation of an analyser for ASN.1. Soundness proof of the BER (encoding rules). Working group at ISO on ASN.1 (London, 1997).

Tools and formal languages

- *Programming languages*: Java, OCaml, Erlang, C[#], C++, XSLT, Ada, Standard ML, Prolog, Pascal.
- *Software engineering*: Test generation, compiler construction, static analysis, program transformations, formal methods (specification, correctness)
- *Development tools*: Emacs, GNU Make, dune, git, shell scripting, scanning and parsing (sed, ocamllex, menhir) etc.
- *Free Software*: <http://github.com/rinderknecht>

Publications and Honours

- 15 papers in journals and conferences, 3 technical reports.
- *Design and Analysis of Purely Functional Programs* (volume 15, *Texts in Computing*, College Publications, UK, Nov 2012, 660 pages).
- One of my mathematical articles is the source for the integer sequence <http://oeis.org/A261003>.
- I received a cheque from Knuth for finding an error in Volume 4 of *The Art of Computer Programming*.
- Translator in French of the love poems *Veintes poemas de amor y una canción desesperada* of Pablo Neruda (Gallimard Poésie, Paris, 1998).
- Editor and translator in Spanish of an anthology of poetry by Paul Valéry, *Las granadas* (Ediciones Rilke, Madrid, 2016).
